

The Official Q3 Newsletter of Bitcore BTX

The #1 Payment Solution

Bitcore BTX Community!

Bitcore aims to be the #1 solution for direct payments. The principal characteristics that are behind Bitcore's massive popularity among users are its significantly lower transaction fee, faster transaction system, and a very transparent blockchain platform that offers all the necessary information to traders in an unadulterated manner. Given that transaction speeds and lower fees are a factor in the applicability of crypto in real-world business usage, it then follows that Bitcore's long-term prospects are quite good, as blockchain technology continues to gain a foothold in business.

Using Bitcore BTX as a payment method instead of the using traditional methods in your business offers the following benefits.

- Immediate availability

There is no third party-dependent waiting period the way there is with bank-owned payments. Once payment is successful, the transaction amount is in your wallet and accessible immediately due to Bitcore's technical features such as **Larger Block Size and Shorter Block Times** which allow more transactions and faster confirmations. You can convert Bitcore into your local currency fiat at the end of each transaction, at the end of each working day or according to a custom set schedule.

- Lower transaction costs

Credit card payments usually end up costing you a 2 to 4 percent fee. With Bitcoin, this amount is a low flat fee, not a percentage of the transaction. And with Bitcore, this amount is a low flat fee according to Bitcoin.

- Eliminate chargeback fraud

A Bitcore transaction is immutable. Once a client has paid for a product or service, the money is in your account. Unlike credit card payments, charges cannot be reversed.

- Attract new customers

As Bitcore rises in popularity, more users seek out participating businesses. This can mean exposure to a clientele you didn't have before.

And where Bitcoin goes, other sturdy altcoins are sure to follow. In the near future, accepting cryptocurrency as payment might be standard procedure. Bitcore will be #1 solution for direct payments. Thus, behind the scene we've been working hard to help users to do more things with the Bitcore BTX which includes trading and buying things, both completely peer-to-peer.

Here, you will find updates on our activities and news from the Bitcore BTX core team along with their plans for Q4 and how these new updates are going to change Bitcore's future.

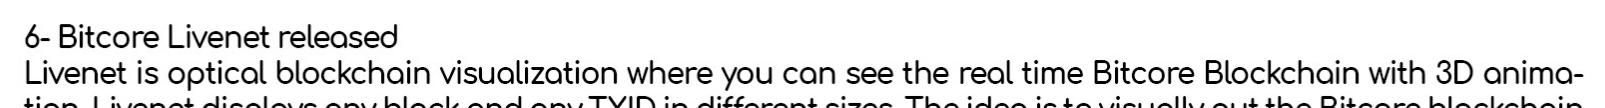

- 1- Official Bitcore White Paper released on 20/07/2018
After intensive work from the whole team, we have released our official Bitcore White Paper. We believe it is on point, focusing both on the technical and ideological fundamentals of the Bitcore project (<https://bitcore.cc/white-paper/>).
- 2- Spanish version of White Paper released on 03/09/2018.
- 3- French version of White Paper released on 14/09/2018.

Bitcore publication team works on Turkish version of White Paper and more languages support.

IMPORTANT UPDATE OF OBLIGATORY CHARACTER NOW BITCORE BTX CORE 0.15.2.0

UPDATES

- 1- **Mandatory Update! Bitcore BTX Core 0.15.2.0 released on 22/09/2018**
Bitcore Core Wallet version 0.15.2.0 has been released which includes a very important security fix for DoS vulnerability, CVE-2018-17144! It is important to keep wallets updated, because this will give you a better security of your BTX. We would highly recommend upgrading as soon as possible.
The release is available at: <https://github.com/LIMXTEC/BitCore/releases/tag/0.15.2.0>
- 2- **Important Update! New Public Key Update for Bitcore on 05/08/2018**
Since we use the same prefix as Bitcoin ("1", "3" and "bc1"), we decided to change the public key prefix. Bitcore BTX should use the following new prefixes:
 - Wallets 1xxx -> 2xxx
 - Wallets 3xxx -> sxxx
 - Wallets bc1 -> btx
 To convert from the old address format to our new address format you can use <https://bitcore.cc/btx-converter>.
More Details: <https://bitcore.cc/important-update-bitcore-public-keys/>
- 3- **Bitcore BTX Core 0.15.1.0 released 21/08/2018**
Bitcore Core Wallet version 0.15.1.0 has been released which includes the new format only (new public key support). However, we highly recommend using core 0.15.2.0 due to important security fix.
The release is available at: <https://github.com/LIMXTEC/BitCore/releases/tag/0.15.1.0>
- 4- **New node seed**
The node seed server is server to transfer available fullnode server. That is the first connection from the wallet. The node seed dumps his addresses to the client.
- 5- **New Testnet**
Testnet is the new platform for testing.

- 6- **Bitcore Livenet released**
Livenet is optical blockchain visualization where you can see the real time Bitcore Blockchain with 3D animation. Livenet displays any block and any TXID in different sizes. The idea is to visually put the Bitcore blockchain for educational purpose. Let's look at a few points of these in some details.
Website: <https://bitcore.cc/livenet/>
- 7- **DropCoin released**
Send payments is equal to sending a direct message -- A DropCoin platform allows users to send Bitcore for any way they can share it on any service (Email, Facebook, Dropbox, Twitter, WhatsApp, and Telegram etc.) or any chat, even without having any technical knowledge of cryptocurrency. The focus behind this is to reach no coin or user they don't have a wallet in first.
Website: <http://www.dropcoin.cc/>
- 8- **TSBW released**
To share small amounts and for everyday uses of Bitcore BTX, TSBW service is created by Bitcore Team. TSBW is a very simple wallet to access your wallet with your wallet passphrase or to use it to redeem coins from a known private key without install a local wallet. No data is stored on the Server!
Website: <https://bitcore.cc/tsbw/btx/>
- 9- **Paper wallet released**
Anyone who plans on holding Bitcore for more than a few months should consider pulling their BTX out of the exchange wallet they're currently stored in and getting them into cold storage named Bitcore Paper Wallet, which is completely offline, and nearly 90% safe and secure. You can use the free web services (<https://bitcore.cc/paper/>) that generate the printable BTX paper wallet for you.

PARTNERSHIPS

- 1- **Games4coins**
Games4Coins is a platform that you can purchase Steam product keys. Buying a game on Games4Coins is really simple. Once you have selected a game, you can quickly and securely pay. Moreover, as a crypto, they accept only Bitcore.
Website: <https://www.games4coins.com/>
- 2- **Kaze Blockchain Solutions partnership**
We are happy to announce strong partnerships with Kaze Blockchain Solutions.
Website: <https://www.kaze.solutions/>

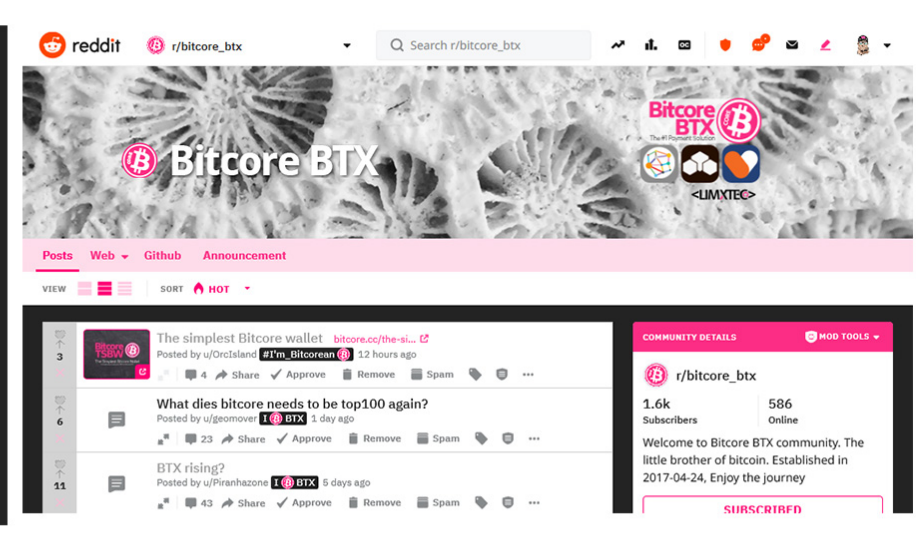

NEW EXCHANGES

- Bitcore BTX has been listed on six new exchanges. These are other great steps towards huge adoption, buying, selling and using BTX for real-live purchases becomes easier every week.
- 1- **Bitsten exchange listing**
 - BTX/BTC; https://bitsten.com/exchange/btx_btc
 - Bit/BTC; https://bitsten.com/exchange/btx_stn
 - Website: <https://www.ktrade.io/>
